

ANACONDA

Greenglobe brand flexible corrugated metal hoses provides high flexibility and extensible connection for all kitchen appliances used for Piped Natural Gas connectivity. Flexible Corrugated Metal Hoses are designed and manufactured in accordance with International standards considering all safety and secured aspects of Gas applications. It is manufactured with closed pitch corrugated design & structure and can be supplied with or without polyolefin based cover as per customer requirement.

Greenglobe flexible corrugated metal hoses are manufactured using high strength corrosion resistant special grade stainless steel material and exposed to special heat treatment which eliminates the stresses caused by the tubing, mechanic forming, connections and welding processes. It also increases the flexibility as well as corrosion resistance of hoses while reducing the spring rate. Heat treatment also helps flexible hose to save the form and the shape given.
